TeMeno GmbH

Since more than 40 years we have specialized in conference, alarm and emergency solutions. Our integrated and practical digital alarm server is used all over Germany - in medical facilities as well as in the industry, in the hotel industry, in authorities, in security service providers and in many other industries, where reliable communication solutions are needed.

Benefits

The MenoDigital Alarmserver provides comprehensive personal security, efficient and reliable emergency communications, specific alarms in disaster situations, fast evacuation of buildings, monitoring of production facilities and technical components, and is considered as a conference and multimedia messaging platform.

- Mobilization & Evacuation
- Voice-recording & Web-playback
- Alerting & Emergency calls
- Hotline & Conferences
- Lone workers' protection & Localization

System Overview

Linux based alarm system. All necessary components are preinstalled. The configuration is done via a web-based GUI. Communication between Spectralink and the TeMeno Alarm system is done via XML-RPC TCP protocol.

- Nurse Call Systems
- Clinical Alarms
- Integration of building management
- Text and voice notification
- Lone Worker Monitoring
