Halo Communications

Halo is a cloud-based secure and scalable platform for enterprise-level clinical collaboration, allowing users to easily collaborate with exactly the right people at the right time, anywhere.

Clinical collaboration is the key to better patient care and outcomes. One of the biggest challenges health systems continue to face is poor and outdated collaboration technology – where analytics, security, reliability, speed and accuracy is lacking. Halo changes all of that.

Halo Messaging

Messaging gives health systems fast and efficient communication among care teams, preventing delays of care and aligning physicians, nurses and clinicians in real time without risking the security of PHI. Attach high-resolution photos, audio, video and documents, and the system automatically confirms message status (Sent/Delivered/Read) to ensure transfer of accountability. Create groups, distribution lists and system-wide message blasts.

Halo Voice

Place calls over system's existing VoIP PBX infrastructure utilizing same Halo application used for secure messaging, on-call schedules and alert notifications. Voice leverages the cloud to enable VoIP features inside and outside healthcare systems, regardless of a user's location. It includes advanced call features like merging and adding calls, role/team-based calling and Handoff shared team extensions.

Halo Alerts

Mobilizes only the most critical alerts, sending them to the same device used for secure messaging, on-call schedules and voice communication, to avoid device-overload. By reducing the quantity of mobilized alerts, clinicians will see a reduction in alert fatigue and an increase in patient and staff satisfaction. Halo also integrates with your EHRs, PACS/Labs, SSO, and scheduling systems.

Halo Smart Scheduling & Teams™

Your source of truth for on-call schedules. Enter schedules through the schedule management tool or integrate with existing scheduling systems. Allows role-based collaboration, giving users confidence their message, call, or alert gets to the correct on-call team.

Halo Security

Halo offers reliability and security by leveraging:

- AWS platform
- ISO 27000 series
- SAE 16

We have strict security features to protect your data, including:

- PHI encryption at all levels
- SOC II and HITRUST certifications
