LAS Middleware

Secure connectivity for messaging across your business platforms.

LAS (Local Alarm Solutions) is a server and software platform solution. Allowing input events from almost any system to then be made into outputs to other systems. LAS simultaneously logs and can report on all events.

LAS has been designed under one simple ethos; "open systems", allowing communication between all types of equipment from any supplier. We believe that the customer should always have the option to choose the best alarm / alert device on the market.

LAS is working today and connects to most major manufactures in United States, Europe and Australia. Our Success is based not just on our LAS product, but also the strong support we provide for our customers.

Today LAS resides in more than 250 solutions installed over 6 countries, with our customers providing a variety of services to over thousands of end users

Wherever you are in the world, we would welcome the opportunity to work with you in developing solutions to your messaging needs.

LAS Benefits: *LAS allows seamless communications across multiple different devices*

- Increased Staff Mobility
- Better interactivity between staff members,
- Personal Duress ,
- Competency Based Work Flow

System Overview

LAS Virtual Server environment

- Single Server connects to multiple Spectralink handsets
- Windows Operating System with SQL Database 2012
- Windows Thin Client for remote connectivity
