

Spectralink Professional Services

Supporting Your In-Building Wireless Solutions

Spectralink Professional Services

Design

Spectralink provides quality wireless network architecture design to ensure optimum voice quality. Spectralink's Wireless Design Service factors environmental impacts on radio frequency before implementation, to provide optimal support for wireless voice and data clients. Wireless Network Design Services are recommended for all Spectralink wireless products and are also useful when expanding or relocating existing systems.

Choose Spectralink Professional Services because we are the experts in:

- customer service
- voice over wireless technology
- wireless infrastructure

At Spectralink, our customers come first.

That's why we offer a range of Professional Services that are focused on making your wireless solution work for you.

Spectralink offers a full suite of options to enhance product support; from initial deployment while under warranty to extended support after the warranty expires. Because uptime and productivity are so important and unique to each environment, Spectralink provides highly responsible and flexible support options.

At Spectralink, we understand that productivity and crystal-clear communication are mandatories for your technology on the job. That's why you can rely on every device, using built-in Spectralink Voice Quality Optimization, or VQO—an engineered system that delivers superior voice over in-building, enterprise Wi-Fi networks. The system is built of technology on the inside of every Spectralink device—and the knowledge and expertise of our partners and specialized System Architects, on the outside.

Built and delivered with intelligence, Spectralink VQO is more than just technology—it delivers the human touch.

VOICE QUALITY OPTIMIZATION

Deploy

Spectralink offers a range of services to ensure that the solution is deployed appropriately following an approved design, in facilities that are ready to host a wireless solution. And we provide a team of expert engineers who can deploy the solution.

Maintain

It is important to make the most of your wireless investment, which is why Spectralink Maintain & Support Services just make sense. The Support Service network is available when you need it and ready to help so you can use your investment in Spectralink technology to maximize your business advantage.

You have a choice with us.

Spectralink offers the 6000 Portfolio (900 MHz), the 7000 Portfolio (1.8/1.9 GHz DECT) and the 8000 Portfolio (2.4/5 GHz Wi-Fi).
