

Modern Healthcare In Motion

Clinicians are required to communicate, collaborate, and securely access sensitive data while providing exceptional patient care in an increasingly mobile environment.

Spectralink clinical mobile devices enable modern healthcare by seamlessly integrating with hospital networks and leading healthcare applications. The result? Improved workflows, better communication among care team members, and more efficient resource deployment.

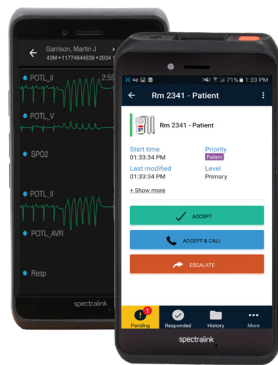

Improved care coordination powered by a Spectralink clinical smartphone reduces the potential for errors and enables clinicians to spend more time with their patients. Designed specifically for healthcare settings, Spectralink's mobile devices feature:

- Unmatched voice quality for clear communication among care teams.
- Access to critical healthcare or facility information from anywhere.
- Integration with leading healthcare applications such as EHR/EMR, Nurse Call, Patient Monitoring, Secure Messaging, Clinical Safety, RTLS, and more.

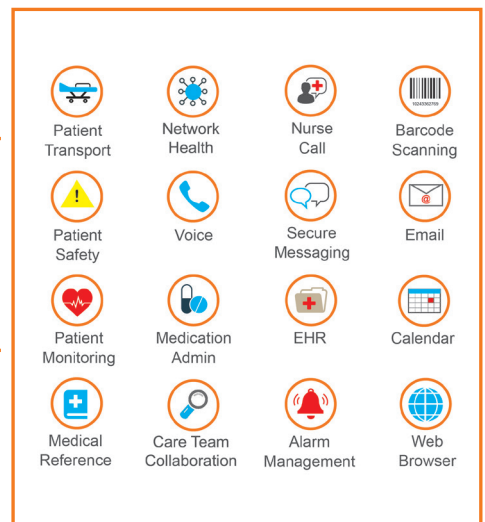

4 Core Workflows Supported by Spectralink Clinical Mobility

- **Communication** How healthcare professionals communicate with and about the patient, including voice and secure texting.
- **Documentation** How the patient's medical experience is documented into the Electronic Medical Record.
- **Notification** How caregivers receive and manage alarms and alerts from the patient, their bed, or various medical equipment.
- **Information** Having information at the caregiver's fingertips enables users to access critical information about the patient, the organization, or various processes and procedures.

A single, secure mobile platform, enabling a broad suite of healthcare applications

Versity Series

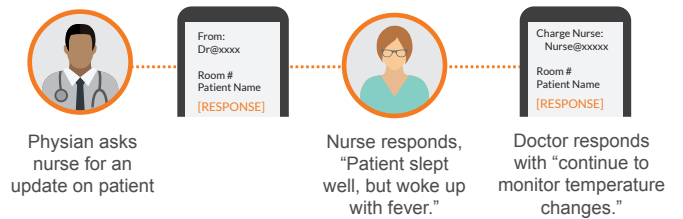

Applications

Healthcare applications integrated onto Spectralink clinical smartphones improve communication, clinical care quality, and safety. Understanding the types of communication flows helps determine the applications and capabilities needed for various types of healthcare staff members. Following are some of our healthcare application partners. For a complete list, visit spectralink.com.

Clinical Communication and Collaboration (CC&C)

CC&C applications on a Spectralink clinical smartphone take secure, HIPAA-compliant messaging and care team collaboration to the next level for enhanced patient care. Care teams can safely exchange critical information in real-time, from patient handoffs, to lab results, to prescribed treatments, and collaborate more effectively on treatment plans.

Workflow Example – Clinical Communication and Collaboration

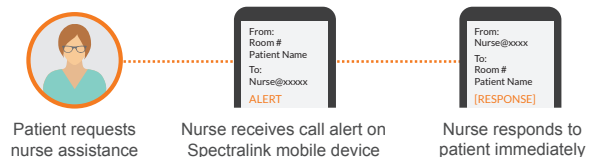

Nurse Call systems

Nurse Call application integration facilitates clear communication between patients and caregivers. Patient needs are addressed faster and more efficiently, leading to higher patient satisfaction and improved HCAHPS scores.

- Simple alerts
- Alert escalation/triage
- Real-time voice communication

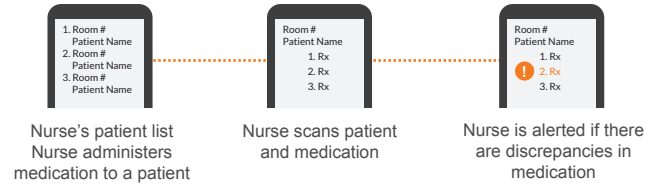

Workflow Example – Manage alarm fatigue

Electronic Health Record (EHR) or Electronic Medical Record (EMR) systems integration

Integration with leading EHR and EMR providers enables medical documentation at the point of care. This integration eliminates the need for clinicians to log in and out of PC terminals, providing more immediate access to patient information, and provides entire care teams with the same information view.

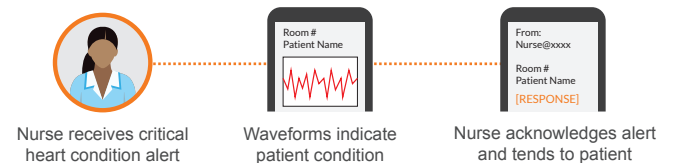

Workflow Example – Nurse medication administration

Patient monitoring applications

Patient monitoring applications and Spectralink mobile devices means the clinician remains connected to their patient even when away from the bedside. Spectralink clinical smartphones feature large color displays that are readable in various lighting conditions. Patient vital signs and waveforms are easily accessed, even on the go.

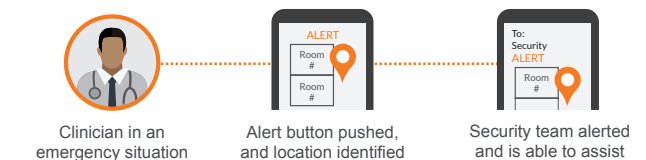

Workflow Example – Receive patient care alerts and patient condition

Clinical safety

Spectralink devices integrate with leading safety applications and are equipped with one-touch, silent panic buttons and programmable emergency cascades such as automated alerting - including details of the patient situation - facilitating timely, informed responses in emergency situations.

Workflow Example – Increase safety

Mobile device management (MDM/EMM)

EMMs (Enterprise Mobility Management solutions) are all-encompassing solutions that help secure critical business data, while the MDM (Mobile Device Management) component is the part of the EMM responsible for managing and securing the mobile device.

IT Administrators use these to control what apps users are allowed to put on a device, to push applications out to users, to encrypt device storage, maintain a standard setting across user groups or the enterprise, enforce strong password protection across devices, lock or wipe a device if lost, and much more.

Fully integrated unified communication and collaboration (UC)

A unified communications (UC) platform enables caregivers to connect with each other for real-time collaboration and data exchange. Using tools such as instant messaging (IM), web conferencing, voice mail, and email improve responsiveness and ensure the timely exchange of information for enhanced patient care.

About Spectralink

As an award winner in mobile technology, Spectralink has been transforming the way our customers work and communicate for 30+ years. Through our determination to do extraordinary things, we enable mobile workforces and empower our customers and partners to explore what's next, what's possible. With our enterprise grade, best-in-class mobile solutions, we are with our customers wherever they work, however they need us. Our people, commitment to innovation and our passion are our foundation for success.
